

C++ Practical Programs

1. Write a C++ program to create a class Complex to represent complex numbers. Implement functions to perform addition, subtraction and display of complex numbers.
2. Write a C++ program using function overloading to calculate the area of a circle, rectangle, and square.
3. Write a C++ program to create a class Book containing book ID, title, author, and price. Write functions to accept and display book details.
4. Write a C++ program to create a base class Shape with a virtual function area(). Derive Circle and Rectangle classes and calculate their areas.
5. Write a C++ program to create a class BankAccount with account number, name and balance. Implement functions for deposit, withdrawal, and balance display.
6. Write a C++ program to create a base class Student and derived class Result. Accept student details and marks and display the percentage and grade.
7. Write a C++ program to accept the name, price, and quantity of 3 products and calculate the total shopping bill.
8. Write a C++ program to accept marks of a student in 5 subjects and calculate the total, percentage, and grade.
